## Diaphragm Seals and Snubbers

### Diaphragm Seals

Diaphragm Seals isolate the measuring element of an instrument from the pressure media. Applications include corrosives, slurries, highly viscous processes, paint, and pulp.

1. **Materials:** Carbon Steel; 316 SS; Hastelloy; Monel; Tantalum; etc.
2. **Connection:** Available in a variety of threaded and flanged connection configurations

### Snubbers

Piston Type Snubbers are effective on those applications that require additional in-line snubbing. Unlike sintered metal snubbers, Piston Type Snubbers resist clogging and are self-cleaning. Five different sized pistons are included with each Snubber to insure the correct amount of snubbing for virtually every application.

1. **Material:** 316 Stainless Steel
2. **Connection:** 1/4" or 1/2" NPT
